SOAP Notes: Performance improvements and 'Turbo Save & Sign' button

Several changes have been made to improve the speed and performance of the application while saving SOAP Notes. A new button option has also been added: "Turbo Save and Sign". This button works the same as the existing "Save and Sign", except that instead of leaving the Notes window open, it automatically closes it and returns to the Patient Account screen. This new option may be useful when you have several Notes to enter in a series, or when you do not need to keep the SOAP Note for the current patient open after signing.
