

See What's New from PayDC!

Here's what's in this Release (March 11, 2022)

PayDC re-branding is in effect for all areas of the software. Please click on the new desktop shortcut icon and access with your username and password as usual.

The symptom scale is now enabled by default. Users can select the Subjective area of complaint and then click directly on the scale without clicking on the symptom first, eliminating a step.

The screenshot shows the PAYDC SOAP Notes interface for a patient named A. Krishna T "Krish" LCA. The interface includes a header with patient information, a date of onset (3/24/2021), and a date of service (3/9/2022). The main area is divided into tabs: Subjective, Objective, and Examination. The Subjective tab is active, showing a list of symptoms with corresponding scales. A red arrow points to the 'Scale' column header. The symptoms listed are Itching, Testing, Pain, Numbness, Tingling, Stiffness, Restriction, Other, and Cramping. Each symptom has a scale from 0 to 10 and a 'None' button. The 'Other' button is also present. The interface includes buttons for 'Add', 'Resolved', 'Exacerbate', and 'Delete' at the bottom. The 'Add' button is highlighted.

Thank you for trusting us as your software vendor!
